FOR IMMEDIATE RELEASE

mLINQS IS FIRST TO HAVE WEB-BASED RELOCATION SYSTEM ON FEDERAL SCHEDULE

FAIRFAX, VA – (September 30, 2004) – mLINQS™, LLC today announced that the company has become the first to have a web-based relocation product listed on any schedule in the federal government. The mLINQS government-wide GSA Travel Services Solutions (TSS) contract number is GS-33F-0007P.

“This GSA Schedule listing makes it easier for federal agencies to buy our system and adds significantly to our credibility in the marketplace,” said mLINQS President Greg McIntyre. “Even before the listing, we were awarded contracts by several agencies. Our early sales underscore the viability of the initial release and the outstanding expertise of our software development and support staff.”

Currently marketed under the product name reloLINQ, the mLINQS relocation system was officially released in March of this year. Now in Version 1.1, a significantly enhanced product is on schedule for release to federal customers in December. The system was designed in-house by mLINQS exclusively for government relocation management. Built on .NET Microsoft technology, it can be customized to meet the unique needs of each customer, such as interfacing with all existing federal financial, travel card and human resources systems, and ad hoc reporting. The system is also compliant with the eTravel Service (eTS) initiative and Federal Enterprise Architecture (FEA), as well as Section 508.

Further information about all mLINQS services and products is available by visiting the website at www.mLINQS.net, or by contacting an mLINQS consultant at 703-322-9700.
