FOR IMMEDIATE RELEASE

mLINQS Releases moveLINQ 6.0 For
Enhanced Federal Relocation Expense Management

FAIRFAX, VA – (February 2, 2012) – mLINQS, LLC today announced the general availability of moveLINQ 6.0, the company's awarding winning system to cost-effectively manage all expenses related to government employee relocation. Version 6.0 is available immediately for standalone software customers, customers enrolled in the mLINQS managed hosting service, and mLINQS' private sector partners.

"Our latest version of moveLINQ offers users unprecedented configurability and flexibility to meet the needs and policy requirements of every federal agency, regardless of size or complexity," said Greg McIntyre, president, mLINQS. "In this era of budget reductions and tighter controls, the software can be quickly customized at the user level to adapt to changes in agency or governmentwide policy, while remaining in full compliance with all federal regulations (FTRs) pertaining to relocation, both domestic and international."

moveLINQ 6.0 features five primary system enhancements. The most important of these enables users to create their own Configurable Relocation Types through the use of two sophisticated administration tables. Not to be confused with simple templates, these new administration tables offer far more flexibility to modify entitlements from the agency level to individual employee relocations. Other system enhancements include more flexibility in controlling maximum limits for temporary quarters allowance, and the addition of tax computations for uniformed military personnel permanent change of station moves.

All of the expenses associated with federal employee relocation are managed electronically by moveLINQ, the first and only fully compliant, Web-based government relocation expense management system. System development, enhancements, training and support are provided by mLINQS in-house staff. For customers of the mLINQS managed hosting service, the system is available 24X7 in a federally-compliant IT infrastructure designed and maintained for Authority to Operate and Certification & Accreditation with agency requirements. moveLINQ is currently used to support relocation for employees of more than 30 federal agencies.

Further information about all mLINQS government products, services and GSA Schedules is available by calling 703-425-1122, or visiting www.mlinqs.net. Federal employees can also follow mLINQS on Twitter, Facebook and LinkedIn.
