FOR IMMEDIATE RELEASE

mLINQS Releases Enhanced Version of Market Leading Federal Relocation Management System

FAIRFAX, VA – (March 4, 2014) – mLINQS, LLC today announced the general availability of moveLINQ 7.0; the company's awarding winning system to cost-effectively manage all expenses related to employee relocation.

Version 7.0 is available immediately for standalone software customers, including federal civilian agencies, the Department of Defense, and mLINQS' private sector partners. For those customers enrolled in the mLINQS managed hosting service, a streamlined update is currently being uploaded, and instructions are available to configure all of the enhancements.

"We developed this new version of moveLINQ to provide greater capability and flexibility for the software in response to both user input and anticipated future needs," said Greg McIntyre, president, mLINQS. "Of particular interest is the system's advanced ability and more robust approach to electronically deal with complex RITA and state withholding taxes. Our research and development staff is once again ahead of the curve to ensure moveLINQ remains the top choice for relocation expense management throughout the federal marketplace."

moveLINQ 7.0 provides its customers with 10 major enhancements, the most upgrades since the system was introduced in 2004. The employee Relocation Income Tax Allowance (RITA) functionality now includes an option for agencies to recreate RITA Voucher documents to, for example, recalculate the tax, without deleting the original document. A new feature for RITA Voucher Tax Years enables improved control over the two-year tax parameters, even when the scenario calls for non-consecutive years.

A significant enhancement has been made to deal with the applicable State Withholding Tax Table. The software now better supports its ability to automatically apply such tax rates on-screen, and to calculate state payroll deductions. Other enhancements include updates to multiple critical user screens. These enable the addition of more unique Admin options, as well as more relocation on-screen flexibility that provides greater detail, and new fields to track an agency's workflow processes.

moveLINQ was the first, and remains the only fully compliant Web-based government relocation expense management system. The software was developed in-house by mLINQS staff, and is currently used to support relocation for employees of over 30 federal agencies. mLINQS managed hosting service customers have access to the system 24X7 in a federally-compliant IT infrastructure designed and maintained to achieve Authority to Operate (ATO) in accordance with Assessment & Authorization (A&A) standards with federal agency requirements.
