FOR IMMEDIATE RELEASE

### **mLINQS Conducts Relocation User Group At National Travel Forum**

**FAIRFAX, VA – (June 4, 2008)** – mLINQS, LLC today announced that the company completed its inaugural relocation user group conference on Tuesday, June 3, during the National Travel Forum in Atlanta, Georgia. The conference was attended by government relocation experts representing federal agencies that have implemented the company's moveLINQ™ relocation expense management system.

“The results of our user group exceeded all expectations,” said Greg McIntyre, mLINQS president. “For the first time, federal managers nationwide came together to share their experiences using our moveLINQ system, and to have an opportunity to collectively make recommendations for product enhancements. We now have a consensus of long-term government needs to use moving forward with future product releases.

“Independent of any forthcoming regulations, federal agencies have taken a proactive approach to streamlining their relocation processes using E-Gov initiatives such as E-Gov Travel to serve as a template. As the migration to moveLINQ and new business models evolves, we're seeing the potential for creation of relocation Centers of Excellence in the very near future.”

The first version of moveLINQ was released in March 2004. mLINQS developed the system in response to input from relocation managers in multiple federal agencies. mLINQS and these federal agencies recognized the need for a comprehensive Web-based system to better manage the costs associated with relocating employees, enable full regulatory compliance, and help to reduce the stress federal employees experience when moving to a new location. The solution was moveLINQ.

At the time, moveLINQ was the first system of its kind designed solely for use by federal agencies. It remains unique in the government marketplace, and today this award winning system has been deployed to support relocation for the employees of more than 30 federal agencies.
